A Year of Research through  
Studio Work, Theses, Lectures,  
Exhibitions, and Events  
at the **Harvard University**  
Graduate School of Design

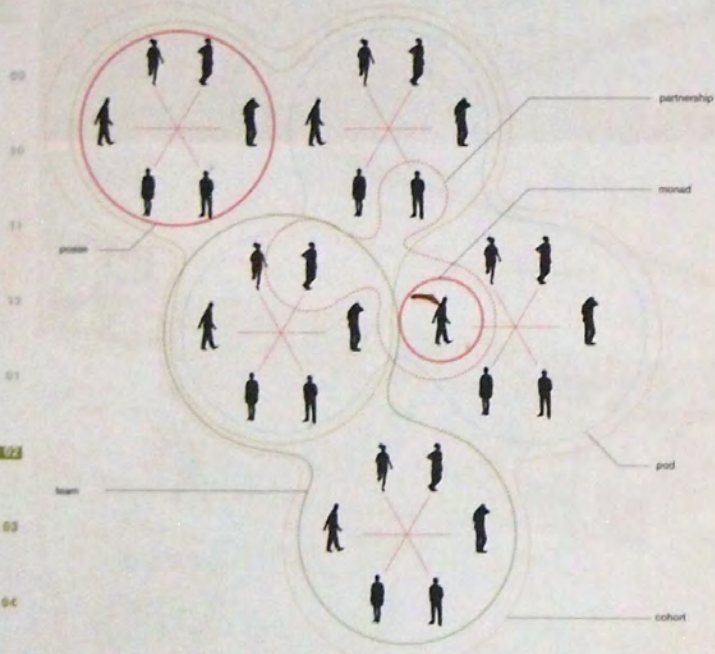

### Seminar Description

What might American education look like in the year 2030? By that time, today's newborns will become college freshmen. The task of looking ahead at today's American educational system was an opportunity to think about the long-range future through a collaboration between the disciplines of Design and Education.

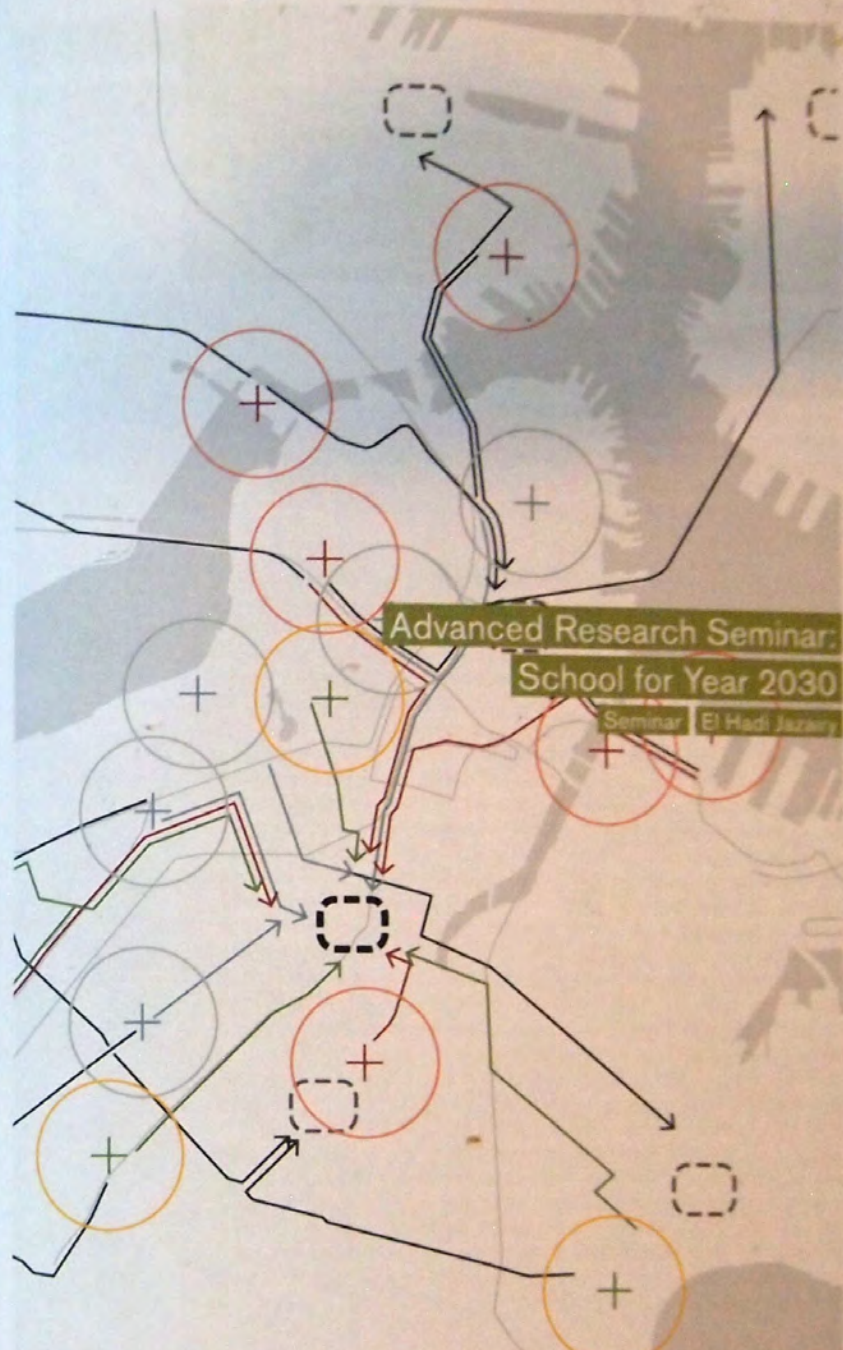

In the first part of the seminar, Hashim Sarkis, Chair of the Research Advancement Initiative (RAI Labs), as well as Lewis Spence, Co-Director of the Harvard Graduate School of Education, organized a series of lectures addressing the future of education in relation to school facility typologies, community models, technology, and sustainability.

In the last part of the seminar, students from the Graduate School of Design and the Graduate School of Education collaborated as "designers" and "clients" in a pedagogical exercise on the design of a new school facility to be developed in a site at Boston.
